4 ? In conventional photovoltaic systems, the cell responds to only a portion of the energy in the full solar spectrum, and the rest of the solar radiation is converted to heat, which increases the temperature of the cell and thus reduces the photovoltaic conversion efficiency [[8], [9], [10]]. Silicon-based solar cells are the most productive and widely traded cells available [11, 12].

For the generation of electricity in far flung area at reasonable price, sizing of the power supply system plays an important role. Photovoltaic systems and some other renewable energy systems are, therefore, an excellent choices in remote areas for low to medium power levels, because of easy scaling of the input power source [6], [7]. The main attraction of the PV ???

Solar PV generation is higher in the summer than the winter due to longer days and the sun being higher in the sky. Figure 4 shows the typical monthly values of solar PV generation for a 2.35kW solar PV system in London which faced 60 degrees from south. From year to year there is variation in the generation for any particular month.

For China, some researchers have also assessed the PV power generation potential. He et al. [43] utilized 10-year hourly solar irradiation data from 2001 to 2010 from 200 representative locations to develop provincial solar availability profiles was found that the potential solar output of China could reach approximately 14 PWh and 130 PWh in the lower ???
