

2020 USER-SIDE ENERGY STORAGE

What is user-side energy storage? 1. Introduction User-side energy storage mainly refers to the application of electrochemical energy storage systems by industrial, commercial, residential, or independent powerplant customers (which in convenience we call "firms").

What are the challenges of user-side energy storage development? Then the challenges of current user-side energy storage development, such as uncertainty of electricity price policy and the lack of household energy storage market, are investigated.

What is the economics of energy storage? The economics of energy storage represents the decision of whether or not to invest in energy storage technologies. Unlike the feed-in-tariff (FIT), which is mainly determined by the supply and demand in the electricity market, the peak-valley spread is a reflection of the time differentials of electricity as a commodity.

How much power does a battery energy storage system have? This battery energy storage system has a rated power and a rated capacity of 1 MW/2MWh. The storage project solely focuses on peak-valley spread arbitrage and does not participate in the auxiliary peak-shaving services or the demand response.

Do real options theories affect energy storage investment decision-making? The first pertains to the economic assessment of energy storage investments. The second is the methodology employed in this study, namely the application of real options theories in the investment decision-making process for renewable energy and energy storage projects.

2020 USER-SIDE ENERGY STORAGE

How does the inflation Reduction Act affect user-side energy storage firms? The introduction of the Inflation Reduction Act (IRA) by the United States has presented new opportunities for the user-side energy storage firms by providing incentives such as the investment tax credits (ITC) for clean energy projects().

Key words: distributed generation, demand response, time-of-use price, user side energy storage, distribution network optimization, evaluation function method, genetic algorithm, simulated annealing algorithm : ???
