

# 3135 MOVEMENT ENERGY STORAGE

How does a 3135 watch work? At its core, the 3135 is automatic and self-winding. This intricate system ensures that the watch harnesses energy from the wearer's movements. The rotor, designed as a bi-directional, axle-style, two-piece system, winds the mainspring, delivering a harmony of human energy and mechanical genius.

How much vibration does a Caliber 3135 use? The movement uses a 28,800 vibrations per hour (vph) frequency, ensuring smooth operation and reliability. The architecture of the Caliber 3135 allows it to withstand shocks and external forces, which is crucial for maintaining accuracy in challenging environments.

What is a 3135 VPH? The 3135, with its in-house development, stands distinct from many other movements that rely on outsourced or modular designs. Its 28,800 vph beat rate, while shared with other high-end movements, is executed with a finesse that many find challenging to replicate.

What is the Rolex 3135 movement? The caliber 3135 movement was first introduced in 1988 and quickly became Rolex's main movement. It has been used in a wide range of Rolex watch models, from the classically styled Datejust models to the demanding Professional watch series like the Submariner date models.

What is a Caliber 3135? At the core of the Caliber 3135 is its robust design. It features a self-winding mechanism with a 48-hour power reserve, which is an impressive figure for its era. The movement uses a 28,800 vibrations per hour (vph) frequency, ensuring smooth operation and reliability.

What is the difference between Caliber 3135 & 3235? While the 3135 movement is already known for its durability, the Caliber 3235 improves upon this by incorporating additional features that increase its resilience. The 3235 movement also includes Paraflex shock absorbers but benefits
