For switches on the kitchen counter, the only safe option is an air switch. Both switch types come with advantages and disadvantages that you should carefully consider before making a final decision. Though electrical switches are more common throughout any house, they are less convenient for garbage disposals because they have to be on the wall.

Air tube and switch mechanism: The compressed air travels through a tube to reach the switch mechanism, typically housed away from moisture or hazardous areas. The pressure from the air triggers the switch to either complete or break an electrical circuit, depending on the intended function.

Install air switch button on sink top. Use air tube to connect air switch button and power module. Plug the controller into the wall socket and press the button to get started. Tips: Gently press the air switch button to start the garbage disposal, press again to turn it off.
