

AVARU WIND AND PHOTOVOLTAIC POWER WITH ENERGY STORAGE

Is energy storage based on hybrid wind and photovoltaic technologies sustainable? To resolve these shortcomings, this paper proposed a novel Energy Storage System Based on Hybrid Wind and Photovoltaic Technologies techniques developed for sustainable hybrid wind and photovoltaic storage systems. The major contributions of the proposed approach are given as follows.

Are wind-photovoltaic-storage hybrid power system and gravity energy storage system economically viable? By comparing the three optimal results, it can be identified that the costs and evaluation index values of wind-photovoltaic-storage hybrid power system with gravity energy storage system are optimal and the gravity energy storage system is economically viable.

Can a hybrid solar photovoltaic-pumped-hydro and compressed-air storage system produce energy? In 2021 Dong,L.,et al. suggested a Performance analysis of a novel hybrid solar photovoltaic-pumped-hydro and compressed-air storage system in different climatic zones. The suggested energy framework can produce powerand put away energy. Solar power is captured and converted by the solar PV framework.

What are the major contributions of hybrid solar PV & photovoltaic storage system? The major contributions of the proposed approach are given as follows. Hybrid solar PV and wind frameworks, as well as a battery bank connected to an air conditioner Microgrid, is developed for sustainable hybrid wind and photovoltaic storage system. The heap voltage's recurrence and extent are constrained by the battery converter.

Does a pumped storage system provide a benefit to wind-photovoltaic hybrid power system? Under the conditions of the wind-photovoltaic hybrid power system, Jurasz et al. studied the OCC of the pumped storage system. The model considered the benefits of pumped storage system, but did not consider the initial cost and operation and maintenance cost.
