

# BULGARIA ENERSOL ENERGY

---

Does Bulgaria have a good energy sector? Bulgaria's energy sector is at a critical juncture, with two main objectives shaping its direction: decarbonization and reducing reliance on Russian energy. Over the past year, Bulgaria has made considerable progress in expanding its renewable energy capacity, particularly in solar power.

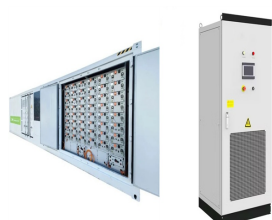

Is Bulgaria getting more solar power? Over the past year, Bulgaria has made considerable progress in expanding its renewable energy capacity, particularly in solar power. Solar energy production has surged from one gigawatt (GWh) in 2019 to more than three GWh today, with solar accounting for nearly half of the country's electric capacity from renewables.

Which energy sources can be used in Bulgaria? Renewable energy includes wind, solar, biomass and geothermal energy sources (although it is not yet known whether geothermal energy could generate any electrical power as only slightly over 100 degrees C had been found by 2023). Bulgaria has a high potential for solar irradiation, especially in the southern regions of the nation.

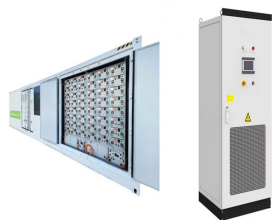

What is Bulgaria's solar power potential? Bulgaria's solar power potential is significant, especially in the southern regions. The country has rapidly expanded its solar capacity from 100 MW in 2011 to over 2,400 MW by 2023, with 600 MW added in 2022 alone. The largest solar parks are Dalgo Pole (207 MW) and Verila (123 MW).

How many renewable power plants will Bulgaria have in 2024? Bulgaria will add over 2,500 MW of installed renewable power capacity by the end of 2024 through the installation of 700 MW of wind farms, 1,600 MW of solar parks, and 219 MW of biomass-fired power plants. In Bulgaria, the National Electric Company (NEK) owns 15 conventional hydro and pumped-storage plants.

# BULGARIA ENERSOL ENERGY

How much energy does Bulgaria produce? Currently, the installed power generation capacity in Bulgaria is 13.247 MW, and the available capacity is 10,771 MW. To support its energy needs, Bulgaria imports natural gas, oil and oil products, and solid fuels (anthracite and black coal, coal coke). The main local energy source in Bulgaria is lignite coal.
