Using the same three 12 volt, 5.0 ampere pv panels from above, we can see that they are connected together in a parallel. The combined connection produces a total of 15 amperes ($5 + 5 + 5$) at 12 volts DC, giving combined wattage of 180 watts (volts x amps), compared to the 60 watts of just one single panel.

Connect the 2 positive solar panel cables to the compatible Y connector. This will likely be the FFM connector. (FFM stands for "female, female, male," meaning the Y connector with 2 female MC4 connectors and 1 male MC4 connector.) Then connect the 2 negative solar panel cables to the other Y connector. This will likely be the MMF connector.
