

## COMPARISON OF ELECTRICITY CONSUMPTION IN THE ENERGY STORAGE FIELD

How can energy storage systems be compared? Energy storage systems are used by a range of application areas with various efficiency, energy density, and cost requirements. This means that the options for effectively comparing energy storage systems using different technologies are limited.

Are energy storage systems the future of power systems? Finally, the research fields that are related to energy storage systems are studied with their impacts on the future of power systems. It is an exciting time for power systems as there are many ground-breaking changes happening simultaneously.

Are there cost comparison sources for energy storage technologies? There exist a number of cost comparison sources for energy storage technologiesFor example,work performed for Pacific Northwest National Laboratory provides cost and performance characteristics for several different battery energy storage (BES) technologies (Mongird et al. 2019).

What research fields are related to energy storage systems? Finally, research fields that are related to energy storage systems are studied with their impacts on the future of power systems. Comparison of low speed and high speed flywheel . Energy densities of different metal air batteries . Features of various electrochemical storage technologies .

What are the characteristics of all energy storage methods? Table 1 and Table 2 contain the characteristics of all storage methods. A comparison of all energy storage technologies by their power rating, autonomy at rated power, energy and power density, lifetime in cycles and years, energy efficiency, maximum DoD (permitted), response time, capital cost, self-discharge rate and maturity is presented.

## COMPARISON OF ELECTRICITY CONSUMPTION IN THE ENERGY STORAGE FIELD

How are energy storage systems classified? This is closely related to the question of how energy storage systems are classified (Kap. 2). Energy systems can be compared by their technical characteristics, function, application areas, markets, installation sites, or operating time-frames. Generally speaking, all-inclusive comparisons of energy storage systems are practically impossible.

The comparison of electricity consumption was lacked. Meanwhile, residents do not care about consumption of electricity. and feedback. Finally, in big data era, this paper ???
