

# CPI OF POWER STORAGE INDUSTRY

How big is the energy storage industry in 2022? The U.S. held industry share of over 13% of the global energy storage systems market in 2022. Regulatory bodies have been crucial in driving investments in the energy and electric infrastructure and have continued to invest in the development, demonstration, and research of energy storage technologies.

What is the growth rate of industrial energy storage? The majority of the growth is due to forklifts (8% CAGR). UPS and data centers show moderate growth (4% CAGR) and telecom backup battery demand shows the lowest growth level (2% CAGR) through 2030. Figure 8. Projected global industrial energy storage deployments by application

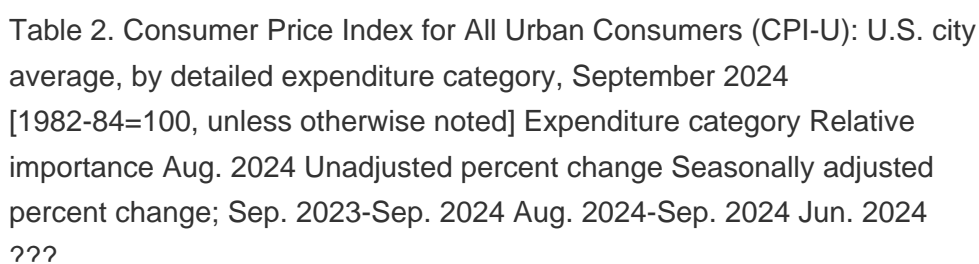

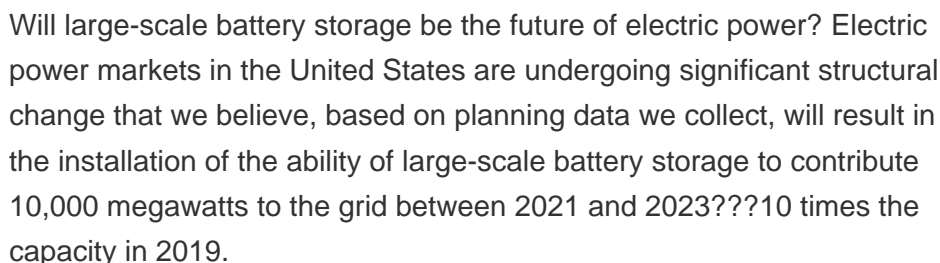

Will C&I use energy storage systems more? But renewable energy isn't always a reliable source of power, and the C&I sector isn't making the most of these resources. So, the C&I sector is likely to use energy storage systems more and more to increase the amount of renewable energy it uses.

When will energy storage become a trend? Pairing power generating technologies, especially solar, with on-site battery energy storage will be the most common trend over the next few years for deploying energy storage, according to projects announced to come online from 2021 to 2023.

What is the average power capacity of a battery storage system? For costs reported between 2013 and 2019, short-duration battery storage systems had an average power capacity of 12.4 MW, medium-duration systems had 6.4 MW, and long-duration battery storage systems had 4.7 MW. The average energy capacity for the short- and medium-duration battery storage systems were 4.7 MWh and 6.6 MWh, respectively.
