If you're using a 24V battery bank and a 24V inverter, you'll want to bring your solar panel voltage up to 24V as well. This can be done either by using 24V solar panels and connecting them in parallel (since this leaves voltage alone) or by connecting sets of two 12V solar panels in series (since this will double the voltage to 24V) and everything else in parallel.

The 12V/24V in product titles (ex. 100W 12V Monocrystalline Solar panel) does not refer to the actual voltage (Voc or Vmp) of the solar panels, but rather to the voltage of the solar system or energy storage system to which the panel is best suited. The voltage of the solar panel must be higher than the solar system voltage.
