How is thermal energy stored in boreholes? The storage of thermal energy in boreholes is accomplished by using vertical heat exchangersburied anywhere from 20 to 300 m below the earth's surface. This facilitates the flow of heat energy into and out of the ground (clay,rock,sand,etc.).

Where is shallow geothermal energy stored? Shallow geothermal energy is stored in the Earth's uppermost layers, up to a few hundred meters deep, and can be extracted using a geothermal heat exchanger or ground source heat pump (GSHP). The heat exchanger paced 1 to 2 m below the surface from the shallow geothermal energy.
