Air tightness testing is the recognised method used to measure the total air lost through leaks in the building. How to pass? To pass an air tightness test, a property needs an air permeability rating lower than 10m³/h/m². Who needs it? All new build or conversion projects for residential or commercial properties require it to ensure air

Underground salt caverns are widely used in large-scale energy storage, such as natural gas, compressed air, oil, and hydrogen. In order to quickly build large-scale natural gas reserves, an unusual building method was established. The method involves using the existing salt caverns left over from solution mining of salt to build energy storages. In 2007, it was first ???
