What is a stationary battery energy storage (BES) facility? A stationary Battery Energy Storage (BES) facility consists of the battery itself, a Power Conversion System (PCS) to convert alternating current (AC) to direct current (DC), as necessary, and the a balance of plant (BOP, not pictured) necessary to support and operate the system. The lithium-ion BES depicted in Error!

Does storage reduce electricity cost? Storage can reduce the cost of electricity for developing country economies while providing local and global environmental benefits. Lower storage costs increase both electricity cost savings and environmental benefits.
