Furthermore, the innovative system design allows for security of both programme and data through a combination of password protection and an attack counter. The AS8267 and AS8268 ICs also allow for an additional external EEPROM for data storage. The external EEPROM is directly accessed by the on-chip 8 bit MCU when connected via the ???

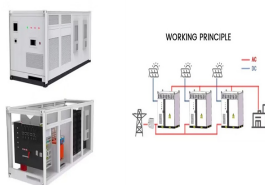

Our Zigbee modules and SoCs feature a 64-MHz, Arm (R) Cortex (R)-based M4F core backed by our comprehensive development ecosystem. They support multiple wireless protocols including Zigbee 3.0 and are available in a selection of memory and packages.

The STM32 chip is one of ST's mainstream products based on the ARM Cortex-M3 core designed for embedded applications requiring high performance, low cost and low power consumption. After the analysis and processing of the MCU, the data of the energy storage system shall be in accordance with the requirements of the Beijing standardization

Energy storage is usually part of the system as well because in most cases the small amount of energy harvested must be stored and used when it is needed. This adds a rechargeable battery to the system. No fewer than five chip companies with MCU product lines have created energy-harvesting solutions. They include: Texas Instruments,

So now that we have defined the requirements of an MCU for smart energy meter service, where do we find such a thing? Here are a few possibilities. 32-bit energy-metering IC The NXP EM773FHN33 is an ARM Cortex-M0 based, low-cost, 32-bit, energy-metering IC. It runs at 48 MHz and features a nested vectored interrupt controller, serial wire debug

A Li-ion battery monitoring and balancing chip, the L9963E is designed for high-reliability automotive applications and energy storage systems. Up to 14 stacked battery cells can be monitored to meet the requirements of 48 V and higher voltage systems as it is possible to daisy chain multiple (up to 31) devices ensuring high-speed, low EMI, long distance, and reliable ???

EEPROM ???SPI-based chips like 25AA02 provide small amounts of non-volatile storage for parameters. Flash ???external flash ICs (numerous BMS hardware suppliers) or onboard flash offer storage for firmware. SRAM ??? fast MCU internal SRAM holds program data. External RAM supplements where needed.

Gauges offer programmable hardware and firmware-based protections alongside high system-on-a-chip accuracy. Monitors offer a reliable and stackable solution for small-scale residential energy storage systems (ESS) and up to grid-scale ESS with high-accuracy voltage measurements ( $\pm 5\text{mV}$ ) for high-voltage battery systems.

Bring your ideas to life easily with PIC(R) and AVR(R) microcontrollers (MCUs). Pick from our broad portfolio of uniquely configurable MCUs and start designing quickly using our award-winning Integrated Development Environments (IDEs) with production-ready code generation tools and best-in-class rapid prototyping hardware.

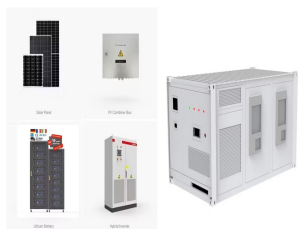

AVR(R) microcontrollers (MCUs) offer exceptional performance, power efficiency and flexibility for a wide range of embedded applications. With easily customizable peripherals and premier code-efficient architecture, you can bring multiple functions to a single chip with seamless and minimal programming through our award-winning development ecosystem.

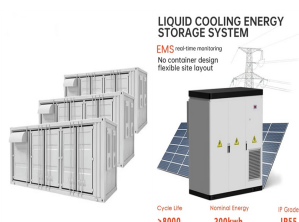

A microcontroller unit (MCU) is essentially a small computer on a single chip that manages tasks within an embedded system without a complex operating system. As the core of the internal calculation and processing of automotive electronic systems, MCU is the key to achieving automotive intelligence. Relevant data shows that MCU chips account for about 30% of the number of semiconductor devices used in a car. This means that each vehicle needs to use 100-200 MCU chips.

the latter method, the MCU and energy metering chip must be powered in different domain, as energy metering chip must connect directly to power line. The follow- Storage unit consists of a SRAM (Static Random Access Memory) and some registers. The SRAM is the data memory to realize DSP algorithm and the register stores
