

FINLAND TORCH ENERGY LIMITED

How is electricity produced in Finland? Electricity is produced in Finland in a versatile way with various different energy sources and production methods. The most important energy sources for electricity generation are nuclear power, hydropower, wood fuels and the fast-growing wind power sector.

Why is Finnish energy so important? Finnish energy power plants and electricity and district heating networks are constantly maintained and renewed, and therefore outages or disruptions are rare. Finland has made decisions on energy with a strong emphasis on climate and the environment. Finnish energy industry works for sustainable energy generation with as low emissions as possible.

Why is Finland a good place to buy electricity? An balanced production mix has also guaranteed that the price of electricity and district heat in Finland is among the lowest in Europe, taking into account purchasing power. Finnish energy power plants and electricity and district heating networks are constantly maintained and renewed, and therefore outages or disruptions are rare.

Does Finland have a free electricity market? Finland is part of the European electricity market, which is subject to free competition. In addition to energy sources, production can be divided according to the kind of power plant the electricity is generated in (e.g. whether it is a heating plant or other production) and how the generation takes place timewise.

How many power plants are there in Finland? the number of power plants in Finland. In Finland, there are approximately 120 energy companies producing electricity and about 400 power plants, more than half of which are hydroelectric power plants. Finland's electricity generation is fairly distributed compared with many other European countries.

FINLAND TORCH ENERGY LIMITED
