

# FUDIAN TECHNOLOGY ENERGY STORAGE

Why is energy storage technology needed in China? In China, RES are experiencing rapid development. However, because of the randomness of RES and the volatility of power output, energy storage technology is needed to chip peak off and fill valley up, promoting RES utilization and economic performance.

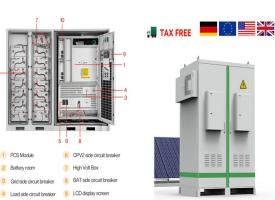

What is the future of energy storage? Looking further into the future, breakthroughs in high-safety, long-life, low-cost battery technology will lead to the widespread adoption of energy storage, especially electrochemical energy storage, across the entire energy landscape, including the generation, grid, and load sides.

How to develop a safe energy storage system? There are three key principles for developing an energy storage system: safety is a prerequisite; cost is a crucial factor and value realisation is the ultimate goal. A safe energy storage system is the first line of defence to promote the application of energy storage especially the electrochemical energy storage.

Why are China's energy storage devices mainly installed in the demand side? China's energy storage devices are mainly installed in the demand side with the proportion of 46% and most of them are DG and micro-grid projects. One reason is that China's large electricity demand brought by the large population and growing economy leads a big peak-valley difference.

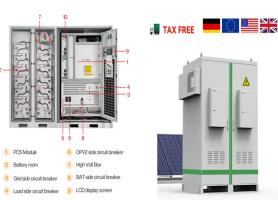

Is energy storage a precondition for large-scale integration and consumption? So to speak, energy storage is the precondition of large-scale integration and consumption of RES. However, China's energy storage industry is at the exploration stage and far from commercialization. This restricts the development of RES to certain extent. For this reason, this paper will concentrate on China's energy storage industry.

What is the energy storage system? The energy storage system includes 1x5 MWx2 h LiB, 1x2 MWx2 h VRFB. And the wind power of 99 MW had been put into operation in August 2012. The system is connected with the 35 kV bus. Through intelligent control, the system stores and releases power according to the coordinating with wind power.
