A single-phase supply is smaller than a three-phase supply meaning you cannot use as much power. A typical house will need a single-phase supply whilst a larger house, flats or commercial building will need a three-phase supply. The way to tell what supply a property has is by looking at the fuse on the service head.

Using threea??phase AC permanent magnet synchronous generator, stable operation, low noise. High and low temperature resistance to insure power generation rate. High quality alloy and a?|

The ATS panel monitors the local mains supply and will request the generator to start if this supply should fail. The ATS panel will then control the switching of the load from the local supply to the generator with a adjustable time delay pre set a?|

On return of the local supply the AMF panel will monitor the Supply to ensure it is stable, then transfer the load from the generator back to the mains supply. The AMF panel will run the generator on for a pre-determined time to allow for any cool down periods required for the generating set. Once this time has elapsed the AMF panel will
