

How will Ghana improve its electricity sector from 2010 to 2030? A stronger foundation has been therefore set for further advancement in Ghana???s electricity sector from 2010 up to the moment. The aim of the government is to increase the capacity of renewable energy continuously in electricity generationwith 10% of the renewable energy in the country???s energy mix by 2030 being a target.

Is electricity supply sustainable in Ghana? By 2023, occasional power outages still occur however, they are not frequent and duration have reduced significantly and thus electricity supply is enhanced [35, 36]. The critical focus of the electricity sector in Ghana has been the financial sustainability from 2010 up to the moment.

How many solar systems are there in Ghana? The government through the Ministry of Energy started a project of increasing solar energy among the rural areas and has distributed about 15,000 solar systems in Ghana's rural areas, equivalent to about 3.2 MW of installed power. The Ministry of Energy was in charge and was supported financially by the development partners [15,16,17].

Is Ghana a sustainable country? The statistic shows that Ghana is still on energy dependency chain,hence unsustainabilityin the future growth. Ghana is now facing serious deforestation,as per the research,and based on World Health Organization the continuous use of charcoal in Africa is exposing close to 90% of the people in Africa to severe effects of health.

Is solar energy a viable option in Ghana? Ghana is a fertile ground for expanding renewable energy sector because of the abundance of the natural resources,geographical conditions and government policies which are favourable. The country is enjoying ample sunlight in the entire year and therefore solar energy is an option that is highly viable.

How has Ghana established its energy sector? The results show that the Ghana Government has established its energy sector based on the definition of the key targets in line with the world trend. Ghana is equipped with a vast quantity of renewable energy potentials which include hydropower, solar, wind, and bioenergy.
