Why should you choose a pan-plug seal & spring energy storage ring? Choose a pan-plug seal & spring energy storage ring and enjoy a high quality sealing solution. In today's competitive market, quality seals are the key to business success.

What are plug & seal components? Plug & Seal components are already being used as standard in vehicle cooling systems and cooling modules of hybrid and electric vehicle batteries. Additional requirements for battery cooling systems can be met with sealed plastic pipe connectors and branched, flow-optimized components (Fig. 10.3).

What are plug & seal connectors? Components with metal or thermoplastic structures coated with elastomers such as the Plug & Seal connectors are a tried-and-tested solution for modular designs (Fig. 10.2). They are made of a metal or plastic pipe with an elastomer seal. The seal is shaped in such a way that it compensates for production tolerances and thermal expansion.

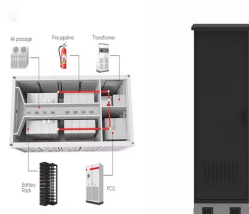

Do high/low-voltage connectors & mounting nuts need to be sealed? Most high/low-voltage connectors and mounting nuts use ordinary spot welding, resulting in high sealing failure rates at the mounting interface. Therefore, the sealing of the fixed parts of the high/low-voltage connectors and the battery box needs to be carefully considered, with strict requirements for the flatness of the battery box wall.

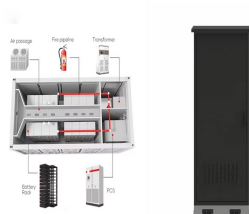

How to choose adhesives and sealants for high-voltage batteries? The selection of adhesives and sealants depends on the desired strengths, service considerations and to a great extent on the manufacturing requirements. A wide spectrum of adhesive systems offers the industrial designer new technology options and thermal management solutions for high-voltage batteries.

1 Introduction. Lithium-ion batteries (LIBs) have many advantages including high-operating voltage, long-cycle life, and high-energy-density, etc., [1] and therefore they have been widely used in portable electronic devices, electric vehicles, energy storage systems, and other special domains in recent years, as shown in Figure 1. [2-4] Since the Paris Agreement [5], the world has been facing the challenge of climate change. The Paris Agreement [5] is a landmark agreement in climate change mitigation, signed by 196 parties, which is legally binding and aims to limit the increase in global average temperature to less than 2°C above pre-industrial levels, with efforts being made to limit the increase to 1.5°C.
