\$begingroup\$ Let me say that kinetic energy of fan is not out of nowhere,electric motor converted some electricity into rotational energy,- other goes into heat, etc, aka energy looses. Consequently only some of this rotational energy can be converted back to electricity,- there will be energetic looses too, like Eddy currents, etc. So due to energy leaks ???

A ceiling fan that has 70 W will consume 0.07 kilowatt-hours (kWh) of electricity in an hour. But what does this translate to in terms of cost? To figure out the operating cost of the fan, you need to know the cost of electricity per kWh in your region. Currently, the average electricity rate across the United States is \$0.23 per kWh.
