Are microgrids economically viable? The business case for microgrids is very robust, meaning that only extraordinarily high values for the carbon cost and gas price (approaching 100-120 \$/tCO2 and 12-16 \$/mmbtu) make microgrid adoption uneconomical.

Suppliers and integrators of microgrids are in the business of meeting their customers" energy needs, and the most common way for supply to meet demand is through requests for proposal (RFPs). Through this formal procurement approach, microgrid end-users try to find the greatest value among detailed proposals submitted by capable suppliers.
