

HP STORAGEWORKS MODULAR SMART ARRAY 1000 ANDORRA

What is HP StorageWorks modular smart array 1000? The HP StorageWorks Modular Smart Array 1000 (MSA1000) is a 2 Gb Fibre Channel storage system designed for the entry-level to mid-range Storage Area Network (SAN). Designed to reduce the complexity, expense and risk of SAN deployment, the MSA1000 is a scaleable, high performance storage system built with investment protection in mind.

How much storage capacity does the HP msa1000 have? The modular design of the MSA1000 allows the user to easily add storage capacity as needed. With the addition of two HP StorageWorks MSA30 disk enclosures with space for a total of forty-two enterprise-class drives, maximum storage capacity is 12TB.

Can hp msa1000 run on SCO UnixWare? HP's MSA1000 SAN solution is available today to run on SCO UnixWare 7.1.3 and 7.1.4 and SCO OpenServer 6.0.0. The MSA1000 with a single controller may be connected to a ProLiant server with SCO UnixWare in one of the below described manners: The StorageWorks FCA2214 and the FCA2214DC are the approved HBAs.

How many hard drives does the msa1000 use? The MSA1000 cabinet scales to 4 TB using fourteen 300 GB, 1" HP Universal hard drives. By simply adding additional StorageWorks disk Enclosures (two enclosures max), the MSA1000 scales to 12 TB using forty-two 300 GB 1" HP Universal hard drives - all within 10U of rack space.

Can MSA array be installed in a server rack? The MSA array and its supported external hard drive storage enclosures can be installed in most standard server racks. After installing the storage enclosures in the rack, you can install the hard drives into the enclosures. Now that the MSA and the storage enclosures are secured in the rack, you may install hard drives in the hard drive bays.
