

HYDRAULIC ACCUMULATOR CONNECTION METHOD

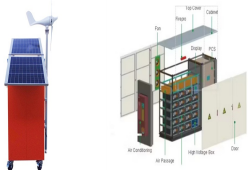

What is the function of a hydraulic accumulator? A hydraulic accumulator stores hydraulic fluid under pressure to perform several functions. It supplements pump flow, reduces pump capacity requirements, maintains pressure, minimizes pressure fluctuations, absorbs shocks, and provides auxiliary hydraulic power in an emergency.

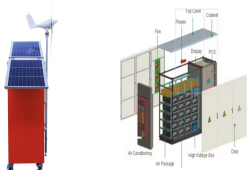

How do hydraulic accumulators reduce pump capacity requirements? Hydraulic accumulators store hydraulic fluid under pressure to supplement pump flow and reduce pump capacity requirements, maintain pressure and minimize pressure fluctuations in closed systems absorb shocks, and provide auxiliary hydraulic power in an emergency.

What does an accumulator store in a hydraulic device? In a hydraulic device, an accumulator stores hydraulic energy. It does this by storing hydraulic fluid under pressure, much like a car battery stores electrical energy. Accumulators come in various sizes and designs, with an initial gas pressure known as the 'precharge pressure'.

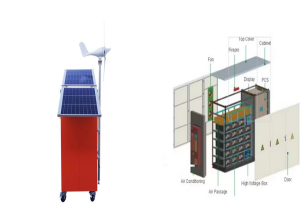

What are accumulators and how do they work? Accumulators are devices that store energy in the form of compressed gas or spring. They are used to handle pressure spikes in hydraulic systems. In normal conditions, the nitrogen charge in an accumulator is kept 5% below the working pressure, so it's out of the circuit. However, during pressure spikes, the accumulator comes into play and eliminates these sudden pressure increases.

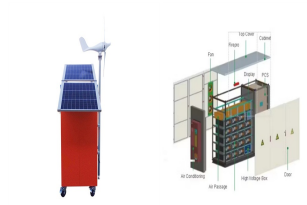

What are the advantages of accumulator assisted hydraulic systems? A properly designed accumulator circuit can offer many advantages to hydraulic system operation. Key among them: Lower system installed cost: Accumulator assisted hydraulics can reduce the size of the pump and electric motor which results in a smaller amount of oil used, a smaller reservoir and reduced cooling capacity.

Accumulators are pressure vessels that store hydraulic energy and deliver that energy back to the system on demand. Float accumulators allow a buoyant valve to open and close the accumulator when necessary.
