There are different profiles of drylin linear systems a?? W, N, T, R, Q, and NT a?? each designed for their own unique applications. These can range from medical devices and physical therapy tools to saw mills and machine tools. Extensive testing is performed on all drylin products in the igus(R) test lab to ensure reliable, long-lasting

Automation technology Weiss GmbH is specialised in the development and manufacture of components for automation technology and a leader in the field of rotary indexing tables and wanted to find a cable feed-through up to the middle of a tool that could hold two sensor cables and two hoses, each with a diameter of four millimetres. The solution: the clean a?|

bound4blue supplies automatic wind-assisted drive systems ("wingsails") that use renewable energy for all ship owners and operators who want to reduce their fuel costs and pollutant emissions and save up to 40% of fuel consumption. The shipping industry is a massive cause of environmental pollution and faces costly emission reduction regulations that present it with a a?|

Predictive maintenance with high-performance polymers Components from igus are wear-resistant and always last longer in applications, as a result of which there is less maintenance work for entrepreneurs to do. With its smart plastics, igus introduces sensors and transmission systems that detect wear in good time and make planned replacement possible by emitting a a?|

High-tech meets nostalgia: the HTWG Konstanz's Sailwind 4 project aims to use old windmills to generate sustainable electricity. igus is supporting the idea financially and with dry-running, maintenance-free a?|

What is an energy chain? An energy chain (also called energy supply systems, drag chains and cable carriers) are mechanical machine elements used to guide and protect energy, data, signals and fluids together in one system, whilst withstanding the most diverse environmental conditions. Our energy supply systems work best when all elements - cables, hoses, interior separation a?

Profile. What was needed: OSC offshore chain Requirements: Safe cable guidance from the ship to the drill was to be ensured under high tensile forces, in corrosive environments, and with long travels. Industry: Offshore Success for the customer: Thanks to an integrated pull rope in the two chain links, the energy chain ensures safe cable guidance even when high forces are applied.

Profile. What was needed: E4/4 energy chains, delivered as a pre-assembled "readychain" system Requirements: Stability and reliability in continuous use, resistant to permanent UV radiation, heat, frost as well as rain and splash water from the ride, Modular and quick assembly and dismantling total solution Industry: amusement rides Success for the customer: During the a?

The compact and durable e-spool(R) combines the advantages of two different energy supply systems in one complete system: A standard e-chain(R) from the E2/000 series is guided by a roller, which has an integrated retaining spring to ensure that the energy chain is always the right length and tension. The customer can choose between three different length variants (0-4 m, 4 a?)

Against this background, the ability of a brushed DC motor to act as a generator and provide a DC supply can be very useful indeed. With the shaft mechanically coupled to and rotated by an external source, causing the coil segments in the rotor to rotate through a magnetic flux in the air gap, a back EMF is measured at the output terminals.

SkyAmps is a wind power plant consisting of kites. The kites rise alternately and unwind their cords, which causes a shaft on the ground to rotate. The rotary movement of the shaft is exploited using a generator to produce electricity in this way. Please choose your delivery location igus(R) Ltd. Caswell Road. Northampton, NN4 7PW. 01604
