How to choose the best energy storage investment scheme? By solving for the investment threshold and investment opportunity value under various uncertainties and different strategies, the optimal investment scheme can be obtained. Finally, to verify the validity of the model, it is applied to investment decisions for energy storage participation in China's peaking auxiliary service market.

How to promote energy storage technology investment? Therefore, increasing the technology innovation level, as indicated by unit benefit coefficient, can promote energy storage technology investment. On the other hand, reducing the unit investment cost can mainly increase the investment opportunity value.

Should you invest in future energy storage technologies? Additionally, the investment threshold is significantly lower under the single strategy than it is under the continuous strategy. Therefore, direct investment in future energy storage technologies is the best choice when new technologies are already available.

Why should you invest in a PV-Bess integrated energy system? With the promotion of renewable energy utilization and the trend of a low-carbon society, the real-life application of photovoltaic (PV) combined with battery energy storage systems (BESS) has thrived recently. Cost-benefit has always been regarded as one of the vital factors for motivating PV-BESS integrated energy systems investment.

Do multiple uncertainties and different investment strategies affect energy storage technology investment? Thirdly, the impact of multiple uncertainties and different investment strategies on the energy storage technology investment is quantitatively evaluated by using the proposed model, and the interaction among policy, technological innovation and investment strategies is investigated based on the results.

What is the investment opportunity value of energy storage technology? A firm choosing to invest in energy storage technology is equivalent to executing the value of the investment option . In this study, the investment opportunity value of an energy storage technology is denoted by  $F(P)$ , that is, the maximum expected net present value when a firm invests in an energy storage technology.
