The primary components of a substation include: Transformers: These devices change the voltage levels of electricity to make it suitable for either long-distance transmission (high voltage) or local distribution (low voltage). They consist of a core and windings that convert electrical energy through electromagnetic induction.

What is a battery energy storage system (BESS)? A battery energy storage system (BESS) or battery storage power station is a type of energy storage technology that uses a group of batteries to store electrical energy.
