

ITALY PSB ENERGY

Will Italy raise its energy ambition? Italy will have to raise its ambition in line with the proposed targets of the European Union's FF55 package for a 40% share of renewables in the overall energy mix by 2030 for the EU as a whole.

How will EU energy policy affect Italy's electricity system? EU energy policy and international developments will have implications for Italy's electricity system. Both call for an acceleration of the transition towards renewable sources of electricity generation.

What is Italy's energy policy? In line with the EU energy and climate policy framework, Italy's energy policy aims to decarbonise the energy supply through the expansion of renewable energy, electrification and increased energy efficiency across the economy. This is also broadly consistent with the IEA roadmap to net zero (IEA, 2021).

How does Italy support renewable power generation? Italy has adopted different instruments to financially support renewable power generation. FiT and sliding FiP schemes have been the main support instruments. Several such schemes coexist.

Should Italy focus on social support for electricity costs? Italy should consider better targeting social support for electricity costs to households in need. Until 2021, customers had to apply to receive the electricity bonus, which hampered access to it. Since July 2021, however, customers need to make a unique generic application for welfare benefits.

Who owns electricity in Italy? Italy has fully unbundled transmission and generation ownership. The number of industrial groups operating either in electricity generation or in electricity supply is over 14 000. Enel is the major player, controlling about 16% of the national production and 36% of
