

Are energy storage systems feasible? From a financial and an economic perspective, the studied energy storage systems are feasibletechnologies to store large scales energy capacities because they generate sufficient returns for project investors, have a high ability to service debt payments from cash flows, and, most importantly, achieves sufficient financial performance. 1.

Is energy storage profitable? Energy storage is costly and, with these market conditions, generation alone without energy storage is the most profitable. With energy storage, there are energy losses due to the round-trip efficiency which contributes to the loss of revenue [31,77]. The LCOE for GIES is higher than non-GIES.

How can a financial model improve energy storage system performance? The model may integrate more data about energy storage system operation as they have an impact the system lifetime. This will have an influence on the financial outcomes. The existing financial model may be enhanced by adding new EES technical details. There are various valuation methods for energy storage.

Is there a financial comparison between energy storage systems? There is a scarcity of financial analysis literature for all energy storage technologies, and no explicit financial comparison existsbetween different energy storage systems. Current studies are simplistic and do not take into consideration important factors like debt term and financing sources.

What is a revenue based energy storage system? The sales generated by the project are referred to as revenue. The revenues for an energy storage system performing energy arbitrage serviceare the product of the agreed energy price with the net discharged power.

How are financial and economic models used in energy storage projects? Financial and economic modeling are undertaken based on the data and assumptions presented in Table 1. Table 1. Project stakeholder interests in KPIs. To determine the economic feasibility of the energy storage project, the model outputs two types of KPIs: economic and financial KPIs.
