How many PCM based thermal energy storage systems are there? Although to date there are not a great number of PCM based thermal energy storage systems deployed, there are many reviews of PCM materials and systems in the literature [20-24]. In the review of PCMs by , the main criteria for selecting a phase change material are specified to be:

What are the different types of energy storage? There will also be a role for other, more efficient, types of storage. Nuclear power, and burning biomass (and perhaps some natural gas) and capturing the carbon-dioxide, may also play a role; however, these forms of generation are not well suited to providing all of the flexibility that will be needed to complement wind and solar power.

What is the London Centre for Energy Engineering (lcee)? The LCEE is an enabling entity interconnecting energy engineering themes across all existing divisions and centres facilitating research collaborations inside and outside LSBU. London Centre for Energy Engineering is led by Dr Suela Kellici.

Will a large-scale energy storage system be needed? No matter how much generating capacity is installed, there will be times when wind and solar cannot meet all demand, and large-scale storage will be needed. Historical weather records indicate that it will be necessary to store large amounts of energy (some 1000 times that provided by pumped hydro) for many years.
