

# LONGYANGXIA DAM SOLAR POWER STATION

How big is Longyangxia Dam solar park? An additional 530 MW p (Phase II) was completed in 2015, covering further 14 square kilometres (5.4 sq mi), making Longyangxia Dam Solar Park, with 850 MW p capacity, one of the largest photovoltaic power stations in the world. The solar power station is integrated with the hydroelectric power station.

Where is Longyangxia solar power station located? The Longyangxia solar hybrid power station is located in the arid north-west of China, in an area with vast solar resources. The reservoir supports a 1,280 MW power station, with four 320 MW turbines.

Where is the Longyangxia Dam located? The Longyangxia Dam is a concrete arch-gravity dam at the entrance of the Longyangxia canyon on the Yellow River in Gonghe County, Qinghai Province, China. The dam is 178 metres (584 ft) tall and was built for the purposes of hydroelectric power generation, irrigation, ice control and flood control.

Why is Longyangxia the world's largest solar power producer? The rapid expansion at Longyangxia coincides with China's fast-growing solar power sector. In 2016, China's total installed capacity doubled to 77 gigawatts. That pushed the country well ahead of other leading producers such as Germany, Japan, and the United States to become the world's largest producer of solar power.

What is Longyangxia solar park? The solar park is considered the fifth, sixth, and seventh units by extension of the 1,280-MW Longyangxia hydropower plant, which has four 320-MW units. According to HHDC, the solar park is connected to the hydropower plant by a one-circuit 330-kV line that stretches for 33 miles.

# LONGYANGXIA DAM SOLAR POWER STATION

How big is Longyangxia PV plant? The Longyangxia PV plant has a capacity of 320 MW and covers a 9 km<sup>2</sup> area. It is connected directly to one of the turbine units by a 330 kV transmission line. As one of the largest solar PV stations in the world, without the balancing power of the Longyangxia hydro turbine, this could pose a serious problem for the stability of the grid.

The Longyangxia Dam Solar Park produces a Brobdingnagian 850MW via 4 million solar panels, and this is set to be shown up by a 2GW (2000MW) project in the Ningxia Autonomous Region which will have 6 million solar panels and commenced phase 1 of construction in 2013. When completed, it will cover 4,607 hectares and will cost \$2.34 billion USD (\$3

Work on the Longyangxia Solar-hydro power station began on March 25, 2013, in the Gonghe PV Industrial Park, covering a 9.16-square??kilometer area, with a production life of 25 years. It also

Longyangxia is a 1,280MW hydro power project. It is located on Yellow river/basin in Qinghai, China. According to GlobalData, who tracks and profiles over 170,000 power plants worldwide, the project is currently active.

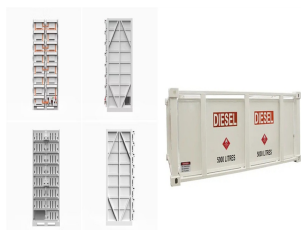

Longyangxia hydropower station details. The Longyangxia hydropower station is located on the main stream of the Yellow River between Gonghe County and Guide County in the Qinghai province. Construction on the power plant was started in 1978, with the first unit put into operations in September 1987. The hydropower station was completed in 1992.

The Longyangxia solara??hybrid power station is located in the arid north-west of China, in an area with vast solar resources. The reservoir supports a 1,280 MW power station, with four 320 MW turbines.
