

# MALTA MASS ENERGY STORAGE SYSTEMS

---

What is the Malta PHES energy storage system? The Malta PHES energy storage system is built upon well-established principles in thermodynamics and uses conventional components that have been present in power plants for hundreds of years. Electricity from the grid is used to heat molten salt and cool a chilled liquid. In these forms, energy can be efficiently stored for long durations.

What is electro-thermal energy storage in Malta? Malta's electro-thermal energy storage system is built upon well-established principles in thermodynamics. When charging (taking electricity from the grid) the system converts electricity to heat, in molten salt, and as cold in a chilled liquid. In these forms, this energy can be efficiently stored for long durations.

How is energy stored in Malta? Energy is gathered from wind, solar, or fossil generators on the grid as electrical energy and sent to Malta's energy storage system. The electricity drives a heat pump, which converts electrical energy into thermal energy by creating a temperature difference. The heat is then stored in molten salt, while the cold is stored in a chilled liquid.

What materials are used in a Malta energy storage system? All materials and components used in Malta's system are fully recyclable and can be reclaimed after use. Common metals and alloys, like steel and aluminum, make up the bulk of the piping, turbines, and other mechanical equipment used in a Malta energy storage system. We Want To Hear From You!

How is the Malta plant built? It is built using proven subsystems deployed around the world today, like heat exchangers, molten-salt and industrial-coolant storage, and turbomachinery. The base Malta plant can discharge 100-MW of clean energy for 10-to-200+ hours. Designed for flexibility, its charge and discharge speeds can be independently tailored to meet an owner's needs.

# MALTA MASS ENERGY STORAGE SYSTEMS

Does Malta use commodity antifreeze? Malta uses commodity antifreeze to store liquid at below-freezing temperatures. Antifreeze solutions are commonly used as heat transfer fluids, making them some of the best-understood liquids in the energy sector. All materials and components used in Malta's system are fully recyclable and can be reclaimed after use.

The system's main controller commands an intelligent buffer control system for necessary action throughout the storage cycle when required to maintain mass balance across the system. The simulation model, therefore, assumes a uniform mass flow rate at the inlet and exit to any component.

Based in Cambridge Massachusetts, Malta, Inc. has developed a Pumped Heat Energy Storage (PHES) system to provide long-duration, large-scale, cost-effective, and safe energy storage. Malta's system stores electricity as thermal energy and then re-generates the electricity on demand for 200 hours or longer, meeting daily and weekly needs.

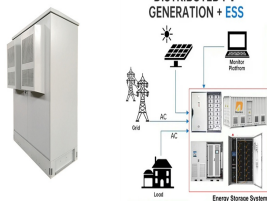

The undisclosed round will help Malta deploy its electro-thermal energy storage system. The Cambridge, Mass.-based company said its system, which has yet to be commercialized, can provide up to eight days of storage for more than 100 megawatts of power, and can act as a direct replacement for fossil-fueled power plants.

CAMBRIDGE, Massachusetts February 24, 2021 Malta Inc., a pioneer in long-duration energy storage, today announced it has raised \$50M in a Series B round of funding. The financing was led by integrated energy group

Storage facility would be one of the largest of its kind worldwide, paving the way for more zero-emissions power generation and a more stable and resilient grid. FREDERICTON, New Brunswick & CAMBRIDGE, Mass.--(BUSINESS WIRE)-- Malta Inc., a leading developer of innovative pumped heat energy storage technology, and NB Power, the ???

CAMBRIDGE, Mass. ??? Malta Inc. is teaming up with Duke Energy to study the socioeconomic, environmental and operational benefits of converting retiring coal units into long-duration, zero-emissions energy storage systems by integrating Malta's 100-megawatt, 10-hour pumped heat energy storage system into existing infrastructure at a Duke

Our innovative market strategies and robust engineering talent are making a difference in the deployment of industrial-scale power generation systems. Malta bolsters its core team with a world-class syndicate of investors and energy ???

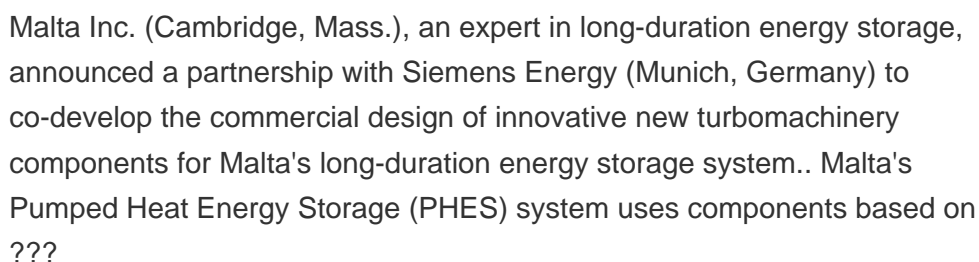

The pumped heat energy storage (PHES) system uses thermo-mechanic components for what Malta said is a novel energy storage application. The technology is charged with electricity from any source and is stored as thermal energy, which then can be dispatched as heat and electricity on demand. The partnership will develop heat pump and heat engine

"Malta's thermoelectric energy storage system offers a flexible, cost-effective, and scalable solution for the storage of energy over long periods of time," said Christian Bruch, President and CEO of Siemens Energy. "With our support, Malta is positioned to be the first company to commercialize such a solution globally.

The undisclosed round will help Malta deploy its electro-thermal energy storage system. The Cambridge, Mass.-based company said its system, which has yet to be commercialized, can provide up to eight days of ???

Long-duration energy storage company Malta Inc. has closed a financing round led by Siemens Energy Ventures and Alfa Laval. They join existing shareholders including Chevron and Breakthrough Energy Ventures. ???

Malta's innovative thermo-electric energy storage system represents a flexible, low-cost, and expandable utility-scale solution for storing energy over long durations at high efficiency. The system is comprised of conventional ???

CAMBRIDGE, Mass.--(BUSINESS WIRE)--Malta Inc., a pioneer in long-duration energy storage, today announced a partnership with Siemens Energy to co-develop the commercial design of innovative new

Tier-1 battery manufacturer EVE Energy will be the first to mass-produce lithium iron phosphate (LFP) battery cells with more than 600Ah capacity for stationary applications. The cells are part of EVE Energy's Mr Flagship series of products and solutions for battery energy storage system (BESS) applications.

Artist's rendering of a Malta 100-MW, 10-hour, 1,000-MWh energy storage plant. Courtesy: Malta Inc. The collaboration will focus on near-term actions to jointly develop a portfolio of long-duration energy storage projects. The team's aim will be guided by the Malta system's key attributes:
