Microgrid Project The FDA campus in Silver Spring, Maryland, included a microgrid as part of a comprehensive ESPC project implemented in three phases. A 60-megawatt combined heat and power plant provides the backbone of the microgrid, which also includes back-up generators, fixed and tracking solar photovoltaic systems, and thermal energy

The base as a whole has an ambitious plan to become a net zero facility using huge PV resources, potentially over 100 MW, as well as wind, ground-source heat pumps, biomass, and solar water heating. The microgrid project is intended to keep a group of central base facilities operating without grid power as an island, in the event of grid failure.

The project could include one larger microgrid or a series of smaller microgrids. The project's pluses include a lower carbon footprint, lower energy costs, the potential for Tigard to serve as an Oregon clean energy leader and the possibility of attracting sustainability-conscious businesses to an industrial district that features a microgrid, said the UO study.
