CFRP, a cutting-edge material, guarantees optimum strength and low weight. Stornetic's expertise in using this material allows an EnWheel to operate at up to 45,000 revolutions per minute. This extremely high rotational speed allows to maximise kinetic storage capacity, while only requiring a small machine footprint.

Stornetic played a major part in a publicly funded project in Germany that has created a virtual power plant with a range of innovative technologies, securing decentralised supply scenarios and localising power quality optimisation. Read more. Nippon Koei.
