What is Penghui energy Liuzhou project? The project is expected to have a total investment of 6 billion yuan and will become a first-class intelligent manufacturing plant for energy storage and power lithium batteries in China. On January 10, the project of Penghui Energy Liuzhou Smart Energy Storage and Power Battery Manufacturing Base was officially laid.

Why did Penghui Energy Invest? Penghui Energy said that the purpose of this investment is to expand the scale of the company's energy storage and power battery business, and to further enhance the company's influence and comprehensive competitiveness in the new energy industry.

How did Penghui energy perform in the first three quarters of 2021? In terms of performance, in the first three quarters of 2021, Penghui Energy achieved revenue of 3.89 billion yuan, up 57.37% over the same period last year; net profit of 164 million yuan, up 16.53% over the same period last year; and deducting non-net profit of 145 million yuan, up 35.10% over the same period last year.

What is Penghui energy's relationship with Shangtong Wuling? In the field of power batteries, Penghui Energy and Shangtong Wuling maintain a close cooperative relationship and ship a number of model batteries for Shangtong Wuling.

How many two-wheeled batteries will Penghui energy produce in 2021? In terms of capacity planning for two-wheeled batteries (soft bags and large cylinders), Penghui Energy is deploying capacity upgrades in Zhuhai, Henan and Changzhou, with a planned production capacity of 3 million sets in 2021, 6.4 million sets in 2022 and 9 million sets in 2023.

Where is a lithium battery plant located? According to the announcement in November last year, the project is located in the northern ecological new area of Liuzhou, Guangxi, with a total planning area of about 550mu and an overall planning capacity of 20GWh. the main layout is lithium battery cell and PACK production line.

As the energy crisis and environmental pollution problems intensify, the deployment of renewable energy in various countries is accelerated. Solar energy, as one of the oldest energy resources on earth, has the advantages of being easily accessible, eco-friendly, and highly efficient [1].Moreover, it is now widely used in solar thermal utilization and PV a?|

Over the past decade, global installed capacity of solar photovoltaic (PV) has dramatically increased as part of a shift from fossil fuels towards reliable, clean, efficient and sustainable fuels (Kousksou et al., 2014, Santoyo-Castelazo and Azapagic, 2014). PV technology integrated with energy storage is necessary to store excess PV power generated for later use a?|

4 . On November 22, a drone from State Grid Bazhou Power Supply Company, after completing its inspection of electrical equipment, gently landed at the nest located atop Tower No. 30 of the Baling-I Line 220kV transmission tower in Bayingol. This marks the official operation of Xinjiang Power Grid's first photovoltaic energy storage grid inspection "tower-based" drone.

Moreover, the shipment of energy storage batteries also experienced significant growth, reaching 102 GWh, reflecting a notable year-on-year increase of 118%. Notably, the first half of 2023 saw CATL emerge as the leading global energy storage battery manufacturer, with an impressive shipment of 35 GWh.

During this period, the company actively reduced the shipment volume of photovoltaic products and prioritized profitability due to the sluggish photovoltaic market. Its energy storage business performed particularly well, with an order reserve of 56 GWh of energy storage systems and signed contracts totaling \$2.5 billion.
