

PHOTOVOLTAIC CONCEPT STOCKS WITH CONSECUTIVE LOWS

What's going on with solar stocks? For many people, solar energy stocks have been one of the greatest disappointments of the last few years. The case for them is so obvious, with most of the world's governments committed to moving away from fossil fuels and towards solar and wind power.

Why did solar Stocks go up in 2020? Around three quarters of the world's solar panels are made in China, so when that country shut down in 2020 during the pandemic, supply of panels fell off a cliff and prices soared. That pushed solar stocks to the highs seen at the end of 2020 (the far left of the above chart), but it also encouraged more production of panels and panel supplies.

Will Sedg & other solar power stocks recover? When it does, SEDG and other solar power stocks will recover. That is why, while SEDG could easily trade a bit lower than current levels given the negativity around the industry, it can be expected to bounce back at some point.

Should you buy solar power stocks? The long-term bullish use case for solar power stocks may be obvious and has become somewhat clichéd, but it is true: There is significant and growing global demand for solar power.

Will a drop in solar stocks cause a 'bounce'? The misalignment of supply and demand in the solar industry has been rumored for some time and to some extent priced in as stocks in the industry have fallen, so any big drop on confirmation of the rumors will prompt profit taking by short sellers and buying from value seekers and could therefore cause a seemingly counterintuitive bounce.

Why did SolarEdge lose a big profit on Friday? The immediate cause of Friday's big drop was a profit warning and a big cut in revenue guidance from SolarEdge (SEDG), a supplier of inverters, the parts that convert the direct current produced by solar panels into the alternating current used by power grids.

Understanding these four concepts — higher highs, lower lows, higher lows, and lower highs — is crucial for traders to accurately identify market trends and make informed decisions. By going through real-world chart examples and clear explanations, they can gain a solid grasp of these elements and improve their TA skills, which will ultimately lead to better results.
