Asphalt is perhaps the most popular roof material as such, asphalt shingle solar panel installations are common and straightforward. Fortunately, you can still install a solar panel system safely and effectively on both. With a flat roof, panels need to be tilted towards the sun for optimal production,

Solar panel efficiency is usually between 18% and 25%; Ergosun solar roof tiles can be hard to spot as credit: TBS Specialist Products. However, unlike solar panels, you can't just swap out a couple of roofing tiles here or there to install a solar tile roof. You need to replace the whole thing.

The cheapest and most practical way to install solar panels is with a combination of rails and brackets. A secure hook is fastened to the rafters underneath your roof tiles and the rails are attached to these exposed hooks across the length of the solar array.

Ballasted (weighted) Installation. In a ballasted installation, the PV array is not fixed to the roof but is held in place by weights, often concrete blocks. A calculation is made for the ballast weight required to hold the PV array on the roof, so that even in windy weather the array will not move or blow off the roof.
