The study made significant strides in understanding vertical bifacial photovoltaic (PV) panels. Using a sophisticated digital twin model, researchers were able to simulate the real-world behavior of these panels, leading to some eye-opening discoveries. One of the standout findings was the thermal efficiency of vertical PV panels.

The number of panels you will need depends on the desired size of your solar system (i.e., the total energy requirement). Common system sizes include 3kW, 4kW, and 5kW. For example, a typical 2kW system suitable for 1-3 people would require between 5 and 8 panels, assuming optimal positioning and efficiency and around 4 hours of sunlight per day.

Location is a critical factor for PV panel installation, as different locations with varying geographical and climate/meteorological conditions may greatly affect PV panels" performance. As for candidate PV panels, the dimension (165 cm x 99 cm, 65 in X 39 in) of a typical residential solar PV high coverage. In this application, the
