

POWER OUTAGE SOLAR ENERGY STORAGE

What happens to solar energy during a power outage? Regardless of whether you are connected to the grid or not, the surplus solar energy generated by the solar system can be utilised for your power needs in the event of a power outage or during the night time usage. This is achieved by a solar battery storage system that also helps in reducing your electricity bills to a great extent.

Can a solar system power a house during a power outage? During grid outages, such as Planned Safety Power Shutoffs, a solar system can power a house if it is connected to battery storage. There are also special inverters that automatically detach from the grid during outages, enabling the solar system to directly power the house to an extent.

How does a solar energy system work? A solar energy system can be installed via two methods: grid-tied and off-grid. Most systems are grid-tied since they are connected to a utility provider's electric grid. This setup allows you to draw electricity from the grid when yours is not generating enough power, say at nighttime or during cloudy days.
