

POWER STORAGE OF 7750 MOVEMENT

How many jewels does a 7750 have? The 7750 is a self-winding chronograph movement with 25 jewels, ball-bearing rotor, unidirectional winding, 1/8-seconds counter, 30-minutes counter, 12-hours counter, 28.800 A/h, power reserve ca. 44 hours. The key distinguishing features of the 7750 family are as follows

How does a 7750 start-stop-reset work? The start-stop-reset functions of the chronograph in a Valjoux 7750 movement are controlled by a layered switching cam. This cam, manufactured through a simple stamping process, is responsible for making and breaking the connection between the movement and the chronograph.

When was the 7750 first introduced? The ETA/Valjoux Caliber 7750 watch movement was officially introduced to the watch world around 1973/1974.

Is a 7750 a workhorse? I better understand the challenge now. The 7750 is a workhorse, but not a beautifully designed movement. The base movement is sandwiched between the chronograph module and the calendar module. The chronograph hour recorder and hammer are on the dial side, so the chronograph function is divided.

What is a Valjoux 7750? The Valjoux 7750 is a watch movement designed and produced by Valjoux, a movement manufacturer that is now part of ETA. The movement is also known as the ETA 7750, depending on its origin and manufacturer.

What is Valjoux ETA 7750? Since the takeover of Valjoux by ETA the movement is also called ETA 7750. This calibre is still produced and is probably the most successful automatic chronograph movement of all times. It serves as basis for several superstructures or modules, including
