

QATAR FIT ENERGY

How much energy does Qatar produce? The International Renewable Energy Agency stated that Qatar's total domestic energy supply in 2020 consisted of 91% gas and 9% oil, with only 0.02% of the country's energy produced from renewable sources.

Does Qatar need solar energy? On the renewable energy front, Qatar aims for solar energy to constitute 30% of its electricity-generation capacity by 2030. In October 2022 the country's first solar-PV energy project, the 800-MW Al Kharsaah power plant, started operating and now supplies around 10% of domestic peak energy consumption needs.

What is Qatar's energy system? Qatar has a unique energy system. The country's infrastructure is geared towards producing and exporting large volumes of natural gas, either directly (in a gaseous or liquefied state), or conversion to liquid fuels (gas-to-liquids) and petrochemicals.

Where is Qatar's energy infrastructure located? Qatar's energy infrastructure is primarily concentrated in Ras Laffan Industrial City to the north, and the Mesaieed Industrial City to the south of Doha, which house most of the country's desalination and energy production facilities.

Does Qatar need a wind farm? Qatar aims to have more than 4000 MW of solar-generation capacity and produce 20% of its electricity from renewable energy by 2030. Feasibility studies are under way for a large-scale wind farm in the north due to the country's wind power potential.

How can Qatar export energy? The most optimal way to export the gas is by conversion to hydrogen. However, in a world increasingly threatened by climate change, rapid decarbonization of global energy systems is a priority, and it is imperative that Qatari policymakers delink the national

QATAR FIT ENERGY

economy from energy exports over the long term.
