Can a high-power robot use a precharged or fueled energy storage device? For a high-power robot, a precharged or fueled energy storage device is one of the most viable options. With continued advances in robotics, the demands for power systems have become more rigorous, particularly in pursuing higher power and energy density with safer operation and longer cycle life.

How do energy storage technologies affect the development of energy systems? They also intend to effect the potential advancements in storage of energy by advancing energy sources. Renewable energy integration and decarbonization of world energy systems are made possible by the use of energy storage technologies.

Which energy storage technologies can be used in a distributed network? Battery, flywheel energy storage, super capacitor, and superconducting magnetic energy storage are technically feasible for use in distribution networks. With an energy density of 620 kWh/m<sup>3</sup>, Li-ion batteries appear to be highly capable technologies for enhanced energy storage implementation in the built environment.

Could robots be self-powered with energy harvesting devices? Ideally, a robot equipped with one or several types of energy harvesting devices could be self-powered with electricity generated from the surrounding renewable energy sources. Therefore, growing interest has been devoted to investigating novel energy harvesting technologies for robots.

How can energy harvesting technology solve the energy challenges of robots? Energy harvesting technologies play a salient role in solving the energy challenges of robots. The renewable energies (such as solar, kinetic, and thermal energies) in the surrounding environments of a robot are free, ubiquitous, and sustainable ( Figure 1 ).

Do Robots need a power management circuit? Hybrid energy devices/systems are often required to achieve self-powered robots. Thus,future researchon power management circuits for robots is also required to deal with hybrid systems and maximize the energy utilization efficiency. For a high-power robot,a precharged or fueled energy storage device is one of the most viable options.

Carbon capture and storage (CCS) is a relatively new strategy for reducing the amount of carbon dioxide introduced into the atmosphere. Carbon dioxide released from the burning of fossil fuels in industrial power plants is ???

??????, ? 1/4 ? ??????, ???

A dramatic expansion of research in the area of electrochemical energy storage (EES) during the past decade has been driven by the demand for EES in handheld electronic devices, transportation, and storage of renewable ???
