What is a Bess facility? ) facilities. BESS Technology BESS facilities provide an opportunity to store energy enerated from another source. BESS facilities are key to improving grid reliability for energy by storing low-cost electricity (such as renewable energy) when there is an oversupply or during periods of low demand so that electricity is av

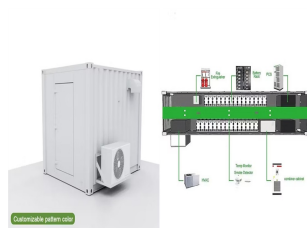

What is a Bess system? These BESS serve the wholesale electric market at either the transmission or distribution system scale. These systems will always be over the 600-kWh threshold and need to meet required safety and fire standards for large-scale energy storage.

How long does a Bess facility last? ing work on site. Operation Grid scale BESS facilities are generally expected to have an operational life of approximately 15 to 20 yearsand are typically monitored remotely,without the requirem nt of permanent staf on site. Staf the site from time to time to undertake inspecti and maintenance activities.

What is a Bess battery system? Integrated with wholesale energy generation battery systemsare high-capacity systems deployed within or as part of large-scale solar or wind facilities. These BESS serve the wholesale electric market at either the transmission or distribution system scale.

What zoning does a Bess system need? These systems are being deployed as part of utility substations and transmission systems and as part of solar and wind electric generation projects. Depending on state enabling legislation, some BESS will be exempt from local zoning, such as when BESS is part of renewable energy or transmission projects that are exempt.

What does Bess stand for? 1.1. This Planning, Design and Access Statement has been prepared by Savills (UK) Ltd on behalf of Pelham Power Ltd (the Applicant) in respect to a proposed Battery Energy Storage System (BESS) facility (the Proposed Development) on land at Green's Farm, Stocking Pelham in the District of East Hertfordshire (the Application Site) / (the Site).

In part one of our three-part series, our experts cover the site layout elements and requirements that can impact a BESS project. The ability to store the electricity generated by solar panels and wind turbines is the key to
