The MPPT Hybrid BOOST charge controller is a combined wind and solar controller with integrated micro-controller. The hybrid charge controller was specially developed for the SHARK Edition and offers the option of connecting additional solar modules. Heat is dissipated via the well-dimensioned housing without a fan, which was very important to us.

To put it simply, they convert a higher voltage DC output from solar panels (and a few wind generators) down to the lower voltage needed to charge batteries. Compared to conventional PWM controller, MPPT technology increases the charge efficiency up to 20% and potentially decrease the power of solar array needed. Data Sheet
