

SHARED ENERGY STORAGE PARTICIPATES IN PEAK LOAD REGULATION AND FREQUENCY REGULATION

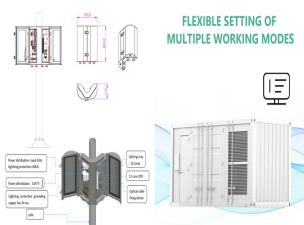

Can a hybrid energy storage system perform peak shaving and frequency regulation services? Then, a joint scheduling model is proposed for hybrid energy storage system to perform peak shaving and frequency regulation services to coordinate and optimize the output strategies of battery energy storage and flywheel energy storage, and minimize the total operation cost of microgrid.

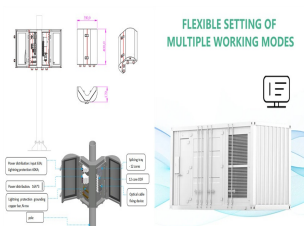

Should energy storage services be shared? In addition, the benefits of peak shaving, frequency regulation, and upgrade deferral of T&D facilities would be increased. Hence, within a limited budget, if the investment costs could be compensated by sharing energy storage service, it would be conducive to increase the SES capacity.

Is shared energy storage sizing a strategy for renewable resource-based power generators? This paper investigated a shared energy storage sizing strategy for various renewable resource-based power generators in distribution networks. The designed shared energy storage-included hybrid power generation system was centrally operated by an integrated system operator.

How can energy storage be shared in distribution networks? By changing the parameters of the power loss rate in transmission lines, the investment budget, the power cost and capacity cost, and the feed-in tariffs of wind and PV power, the proposed model is able to share energy storage appropriately in distribution networks and operate the whole power generation system economically.

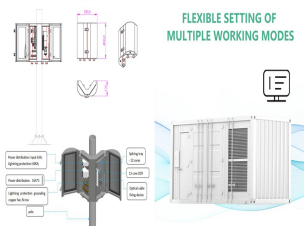

What is the multi-timescale regulation capability of a power system? The multi-timescale regulation capability of the power system (peak and frequency regulation, etc.) is supported by flexible resources, whose capacity requirements depend on renewable energy sources and load

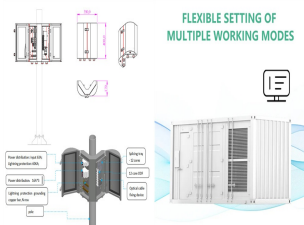

SHARED ENERGY STORAGE PARTICIPATES IN PEAK LOAD REGULATION AND FREQUENCY REGULATION

What is a frequency regulation model for Microgrid with Share energy storage? A frequency regulation model for microgrid with share energy storage is established. A DRL-based economic frequency regulation method is proposed. Performance and operating cost of frequency regulation are considered together. Multiple frequency regulation methods are compared and analyzed.

where $P_{t_{ess}}$ is the charge and discharge power of centralized shared energy storage to meet the regulatory demand of multi-scenarios at time t ; $P_{t_{ess}} > 0$ means that the shared energy storage meets the regulation ???
