Solar tracking systems: single vs dual axis. A single axis system moves the panels through one range of motion. The axis is typically oriented north-south, so the solar panels can tilt east through west as the sun rises and sets. A dual axis system can tilt in two directions. One of the axes works as above, to maximise generation through the day.

Konza Solar Trackers makes the most advanced optical solar tracker available today. Our dual axis solar trackers represent a game-changing technological advance that unlocks solar's vast potential.

Shandong Zhaori New Energy participated in the Intersolar South America in Sao Paulo. Shining Bright at the Solar Exhibition: A Spotlight on Solar Tracking Technology From August 27 to 29, 2024, the Intersolar South America, an international exhibition on solar photovoltaic (PV) and energy storage, grandly opened its doors at the Expo Center Norte in S?o Paulo, Brazil.

That's because the M18KD Gearless Dual-Axis Tracker has superior accuracy in locating the position of the sun programmed with an astronomical algorithm both azimuthally (around its horizontal axis) and elevationally (around its vertical axis). The M18KD Gearless Dual-Axis Tracker meets market requirements in the post-feed-in-tariff era.

The project focus is industrialization of the Dual Axis Solar Tracker concept that was developed in the Solar Tracker product development project conducted in 2009. The Master Thesis is conducted by two students from Mechanical Engineering and Product Development at Chalmers together with SKF personnel. The students were also members of the
