How do you store light as energy? Re your next question storing light as light seems a pointless exercise. We don't store electricity as charge, we store it as chemical energy in a battery because that's easier, cheaper and more useful. If you want to store light put the energy in a battery then use the energy to power an LED.

Can Lightning store electricity? A practical means of storing lightning energy is feasible, it simply requires the will to do it. It requires a network of equal resistance legs, a network of voltage dividers, to lower the voltage. Can lightning be harnessed to store electricity? The idea of harnessing so much energy and storing it is immensely appealing.

How do you store electricity as a charge? We don't store electricity as charge, we store it as chemical energy in a battery because that's easier, cheaper and more useful. If you want to store light put the energy in a battery then use the energy to power an LED. @raptortech97: we can store charge temporarily in a capacitor and we can store a magnetic field temporarily in an inductor.

Can lightning energy be stored in batteries? Lightning energy can be caught & stored by the help of ???Solar cells??? or ???Solar Penal ??? . They can convert in some other form of energy like Electricity, Mechanical, so we can say that we can use it according to our convenience Hope this helps! Still have questions? What would happen if lightning energy was stored in batteries?

How do we store sun light? So, maybe, the very first thing that we need is to find such a media to store the sun light, as that hot gas containing atoms of rubidium or may be that should be some sort of a solid matter, and a second step is to create a sort of a convertor to transform that collected energy into a mechanical or electrical power.

Can we store light from the Sun for later use? If we're interested in generating photons and then using them for practical purposes later, the current answer applies. If, however, you want to store light from the sun for later use, a very different limitation exists, which is that transmission and reflectivity are tradeoffs.
