

# TANZANIA RIMAC SINESTACK

What is sinestack & how does it work? Details have been eagerly anticipated since the company announced it was going into stationary energy storage back in May. The unit, called SineStack, is a lithium iron phosphate (LFP) cell-based modular BESS solution with an energy storage capacity of 790kWh and a 400kVa output.

Who is Rimac energy? One of Rimac's slides shown during its presentation at Energy Storage Summit Central Eastern Europe (CEE). Image: Cameron Murray /Solar Media. Rimac Energy, the battery energy storage system (BESS) division of EV supercar company Rimac Automobili, has unveiled its new product at the Energy Storage Summit Central Eastern Europe (CEE).

Are Rimac energy specifications guaranteed? Note: Specifications in the above table are design estimates only and are not guaranteed. Contact Rimac Energy for project-specific data as final values depend on system design, location, and use case.

How much does a Rimac Supercar cost? We then ask Laublaettner what Rimac's approach to pricing will be. Its parent company's Nevera supercar retails for around \$2.2 million (US\$2.2 million), 30-40x the average price of a new electric vehicle (EV). Laublaettner is clear that the ESS market requires a vastly different approach.

Rimac Energy, the energy arm of Croatia's Rimac Group, is taking its first step into the UK market with its SineStack battery energy storage system. The company is gearing up to deliver the SineStack unit to Colchester by 2025, where it will serve as a cutting-edge solution for grid stabilization and energy storage.
