TDT Smart BMS is a new era/new standard smart BMS with Bluetooth and smart communication, passes all kinds of tests, suitable for 10A-200A high current design, pre-discharge function, history storage and record function.

A BMS employs balancing mechanisms to ensure that all cells are charged equally. This process, known as cell balancing, can be achieved through passive or active methods. Passive balancing dissipates excess energy as heat, while active balancing transfers energy from higher-charged cells to lower-charged ones.

Additionally, the growth of smart grids and the increasing adoption of renewable energy sources will drive the demand for advanced BMS solutions. These trends point towards a future where cloud-based BMS are integral to the stability and efficiency of energy systems.

Since established in 2015, TDT BMS has made its mark in the field of lithium-ion battery solutions. We possess expertise in building custom lithium-ion battery packs. Independently developed 1 ~ 256S? 1/4 ?3.2V-1800V? 1/4 ?, 1 ~ 500A hardware, software intelligent BMS, and active balancer.
