There are issues with a solar panel or the solar panel wiring: There is a mechanical or electrical issue with an individual panel (or multiple panels). Battery charging occurs only when the power generated by the PV panels exceeds the power consumed by the system's DC loads. To check the PV array's power generation and load power usage:

Examine the DC and AC wiring for any signs of damage or loose connections that may be causing the issue. Verify the inverter's settings, such as maximum power point tracking (MPPT) algorithms and grid configurations, to confirm they are appropriately configured for your specific solar power system. Step 2: Identifying and Resolving Fault Codes
