

THE ROOF PHOTOVOLTAIC PANELS ARE NOT FULLY INSTALLED

Can solar panels be installed on a combustible roof? In general terms, solar panels should not be installed on combustible roofs unless some form of fire protection can be installed between the panels and the roof e.g. concrete panels or pebble ballast. 3. Location of solar panels

Can solar panels be installed on a roof? Solar panels are a popular choice for homeowners looking to reduce their carbon footprint and save on energy costs. However, installing solar panels on roofs can come with its own challenges and potential problems.

Do solar panels damage your roof? While solar panels themselves will not inherently damage your roof, an improper installation can lead to problems down the line. It is crucial to ensure that the installation is done correctly by a professional, or with thorough research and proper planning if you choose to do it yourself.

What happens if solar panels are not installed properly? Issues such as leaks, broken tiles, and structural damage can occur if the panels are not installed properly. To avoid roof damage, working with experienced installers who understand the intricacies of solar panel installation is essential. They will know how to secure the panels without compromising the integrity of your roof.

Should I replace my flat roof before installing solar panels? The majority of flat roofs are made of traditional felt, which has a lifespan of approximately 15 years. So if your flat roof is over 10 years old, it would definitely be worth replacing it before installing solar panels. The same applies if you are planning to build an extension on your home and place solar panels on the flat roof.
